

CSV Aggregate Format

For greater privacy you can upload a data file in which students are aggregated by the paths they take. Here is an example:

path, count

"2006-Enrolled-STEM-Math--2007-Enrolled-STEM-Biology--2008-Dismissed-STEM-Biology",600

"2006-Enrolled-STEM-Computer Science--2007-Enrolled-STEM-Computer Science--2008-Enrolled-NonSTEM-Economics",400

"2006-Enrolled-STEM-Physics--2007-Enrolled-STEM-Biology--2008-Enrolled-STEM-Physics",300

The first column header must be “path” and the second column header must be “count” CASE SENSITIVE.

The path column contains a string which describes the status over time of a group of students. The statuses description at each timepoint are separated by ‘--’. For each substring delimited by ‘--’ the time and groupings are separated by ‘-’ with the time value coming first.
